Elite Workout Manual

Chapter 6 – Legs (Hypertrophy & Athletic Performance)

Objective

Develop balanced lower-body muscle, improve explosive power for cricket and pickleball, strengthen knees and hips, and maintain athletic movement quality.

Order	Exercise	Sets	Reps	RPE	Rest
1	Hack Squat	4	8–10	8	2 min
2	Leg Press	3	10–12	8	90 s
3	Seated Leg Curl	3	10–12	8	75 s
4	Leg Extension	3	12–15	8–9	60 s
5	Standing Calf Raise	4	12–15	8	60 s
6A	Walking Lunges	2	12/leg	8	—
6B	Cable Woodchopper	2	12/side	8	60 s
7	Box Jumps or Broad Jumps	3	3–5	Explosive	90 s

Why This Leg Day?

Your strength-focused lower session earlier in the week develops force production. This session emphasizes muscle growth and athletic qualities without excessive spinal fatigue.

Athletic Transfer

Box jumps improve rate of force development, while lunges enhance single-leg stability that carries over to sprinting, changing direction, cricket, and pickleball.

Technique Cues

Control the lowering phase on every machine movement. On jumps, prioritize soft, quiet landings over jump height.

Common Mistakes

Using partial range of motion on hack squats, bouncing on leg press, rushing calf raises, and performing jumps while fatigued.

Progression

Add weight when all sets reach the top of the prescribed rep range with 1–2 reps left in reserve. For jumps, focus on higher quality rather than higher volume.
